Biological Rhythms as a Basis for Mood Disorders

Biological Rhythms. DEA / Professor Alan Hedge. Biological Rhythms. A biological rhythm is any cyclic change in the level of a bodily chemical or.

Biological rhythm, periodic biological fluctuation in an organism that corresponds to, and is in response to, periodic environmental change. Examples of such.

Biological rhythms and their temporal organization are adaptive phenomena to periodic changes in environmental factors linked to the earth's rotation on its axis .

The Biological Rhythms clock plays a physical, mental, and behavioral role that responds to light and dark. For example, the circannual rhythms were entrained to sinusoidal photoperiodic cycles when the zeitgeber periods Biological Rhythms 4–24 months and 2–12 months in antler replacement of the sika deer, *Cervus nippon* and in testicular development of *S. Environmental Relations and Behavior* Horst O. Rhythms Biological Rhythms cellular features and enzymatic activities also show a rather strong similarity with a cluster around midnight. For example, the circannual rhythms were entrained to sinusoidal photoperiodic cycles when the zeitgeber periods were 4–24 months and 2–12 months in antler replacement of the sika deer, *Cervus nippon* and in testicular development of *S. Could externally desynchronized circadian rhythms be resynchronized in shift Biological Rhythms.*

We will offer here some hypotheses and models for possible putative mechanisms of a circadian system of man. Gwinner suggested that at least some circannual rhythms with weaker self-sustainability were more dependent on environmental zeitgebers and more easily affected by them than circadian rhythms.
