This process should span virtually the entire spectrum of society, from corporate board rooms to federal agencies, from elected officials to health insurers and employee unions, from health and medical professionals to teachers and school administrators, from foundations and public service organizations to medical and public health researchers, and of course, it must involve entire communities and families, including parents, relatives, friends, and the children themselves. Manufacturers, perhaps motivated by some form of government incentive, should continue to push for healthful new products that are more appealing to a range of people. HowcanIpreventmychildfrombecomingobese?Noindustryaimstopromotewe Treatment is depends upon the tumor type, grade, and location. In reviewing the available evidence to inform this report, there was an abundance of scientific studies on the causes and correlates of obesity but few studies testing potential solutions within diverse and complex social and environmental

contexts, and no proven effective population-based solutions. Among the actions that schools can take to get students more active, they should also call for an independent assessment of federal agricultural policies, including subsidies and commodity programs that may affect the types and quantities of foods available to children through food assistance programs.
