Response time versus data size for dynamic invocation using ORB1. There are several other parameters that influence the marshalling of the data and hence the response time. This book addresses the need in the era of multi-tier systems to implement security solutions across all enterprise applications, not just firewalls that target intrusion from the outside.

We developed an IDL that incorporated several basic data types inside a structure. Two different adapter objects were implemented, one for static invocation and the other for dynamic invocation. The result of the query contains a sequence of Items.

DI uses stubless runtime binding with the server object. We measured performance for different adapter objects were implemented, one for static invocation and the other for dynamic invocation.
