Dapagliflozin improves muscle insulin sensitivity but enhances
endogenous glucose production. Several previous studies have
demonstrated the acute glucagon-lowering effect of GLP-1 and
its agonists in patients with and without T2DM 7 – 923 –
Metabolic response to sodium-glucose cotransporter 2
inhibition in type 2 diabetic patients.

As shown in Figure 4 there was an enhanced postprandial insulin to glucagon ratio.
At each study visit, baseline-adjusted fasting glucagon and
baseline-adjusted iAUC glucagon on the OGTT were compared
between the study arms by analysis of covariance Table 2. The
protocol is available from R. A limitation of the study is
that we did not directly measure liraglutide concentrations at
each OGTT.

P values represent linear trend. The study protocol was approved by the Mount
liraglutide also induced a paradoxical increase in
postchallenge glucagonemia that first emerged at 12 weeks and
persisted over the week treatment period. Metabolic response
to sodium-glucose cotransporter 2 inhibition in type 2
diabetic patients.
