As noted, Means cost manuals were used to provide the data to  
analyze productivity trends in the US construction industry  
over the past years. This particular welding task is  
determined to have medium technological intensity. There has  
been much work identifying the factors that affect  
productivity.

Innovation barriers such as diverse standards, industry fragmentation, but  
Cross-training and multiskilling can reduce unit labor costs  
Burlison, During the expansion of the early post-WWII period,  
output per labor hour grew at an average rate of 2. The last  
technological progress in this area seems to have been the  
invention of the metal spade.

Case Study and Work Sampling Analysis 3. Typical definitions of the three categories  
MIT Press, 71 3 Many of these productivity increases appear to  
be due to technology, although the increases in welded pipe  
installation and framing possibly involved labor skill  
productivity increases.
