JSTOR: Access Check

Repetition compulsion is a psychological phenomenon in which a person repeats a traumatic event or its circumstances over and over again. This includes reenacting the event or putting oneself in situations where the event is likely to happen again. This "re-living" can also take the form of dreams in which memories and At the same time, the repetition of unpleasant.

According to it, instinct was not a tension of energy which impinged upon the mental sphere, which arose from an organic source and which aimed at removing a state of excitation in the organ from which it originated. If we understand wish, again-ness compulsion, and death instinct that way, they form a continuum.

Procedural memory, however, can be verbal in habitually recited speech like an actor's part or a too-often-repeated lecture by a professor. Psychiatrist Leslie Brothers insists on a social brain rather than an individual one. In effect, he poses once again a problem that apparently baffled William James.
